

# Half-Bitcoin (HBTC) White Paper

## Introduction

Half-Bitcoin (HBTC) is a decentralized open source cryptocurrency running on the Ethereum blockchain. The cryptocurrency was created by an anonymous developer aiming to provide the world with an asset class that is deflationary, with zero inflation and taxation, as well as providing significantly higher returns than traditional investments. HBTC also seeks to capitalize on the halving of Bitcoin and all its positive features while maintaining or widening the current gap in perceived value between BTC and HBTC.

## The Project

HBTC vision is to create a new crypto currency that partakes of many of Bitcoin's major features: it will be finite, deflationary, easily exchangeable, immune to agency interference and no monetary supply manipulation or external state pressure will be possible. HBTC seeks to offer a fair distribution system by providing its own tokens through staking rewards initially and ensuring maximum decentralization. Moreover HBTC also offers several important differences from its competitors such as earlier halvings than BTC thus offering more reward for its early adopters compared to other coins with fees. Half-Bitcoin aims to encourage users seeking great returns without worrying about potential value decrease due to external forces.

In order for this project to have full success however we need everyone's help; the mining community can secure the network by supporting staking pools for instance, developing innovative platforms compatible with HBTC and constantly check on others contributions so that developers double check each others work can help us keep our decentralized playground fun and trustworthy!

### Advantages of Half-Bitcoin (HBTC):

- Zero inflation rate – this helps ensure that HBTC's value increases at a stable Rate achieving consistent long term growth

- Deflationary – This helps ensure that price stability is achieved over long periods; creating opportunities for steady gains in purchasing power as well as protection against wild swings

- Community Driven – This shields users from multiple factors -including malicious parties trying to manipulate the coin's market prices by creating fear through negative news or FUD.

- Early halving compared to Bitcoin – These halvings mean better rewards sooner helping lead greater incentive towards mining/staking participation quicker than other coins within similar timelines helping solidify the security of our network quicker and rewarding those who get in early further helping ensure scarcity and therefore further increase in long term value

- Open source code – This allows non technical members when viewing code logical approaches used upholding proper procedure been taken during minting process ensuring maximal transparency

#### Risk Factors/Cautions:

Whilst vast opportunity lies ahead of us regarding Half Bitcoin no investment should ever be entered into blindly. Please take note of any background research completed by you before investing in anything including looking at past performance etc—this document does not represent financial advice . Additionally please make sure if you do decide to participate in any manner contributing resources towards this initiative you completely trust those you are dealing with —we stand behind our integrity but advise users always use own insight when making decisions especially ones involving their time/money

#### Half-Bitcoin (HBTC) Single Laser Eye

“Half-Bitcoin Laser Eye” meme, with the addition of a single eye, will represent the idea of the Bitcoin halving event and the supporting role of the "Half Bitcoin" or \$HBTC meme token. The meme will be used to spread awareness and drive interest in the impact of the halving on the value of Bitcoin and the role that \$HBTC will play in supporting this.

By visually representing the halving event and the role of \$HBTC as a single laser eye, the meme will symbolize the reduced supply of Bitcoin and its impact on the value of the cryptocurrency. This approach will appeal to those who are familiar with the world of cryptocurrencies and are interested in understanding the implications of the halving and how \$HBTC will support this event. The meme will also tap into the excitement and optimism of the wider cryptocurrency community and highlight the impact of the halving on the value of Bitcoin and the role that \$HBTC will play in supporting this.

By going viral, the "Single Laser Eye" meme will help bring attention to the Bitcoin halving event and the supporting role of \$HBTC, driving up demand for both. The meme will also serve as a tool for educating people about the halving, its impact on the cryptocurrency market, and the benefits of supporting \$HBTC.
